BUSINESS SYSTEMS ANALYST

Business Analysis · Process Improvement · Business Intelligence

SUMMARY

Business systems and process modernization professional with an accounting and finance foundation, analyzes current-state workflows, designs business systems, SOPs, and data quality controls, and measures business impact, now augmented with AI and an M.S. in Computer Science (AI concentration). Delivered financial reporting automation, BI dashboards, and workflow digitization across US, UK, and APAC operations. Published author of two AI system frameworks (supply chain risk screening; SME financial intelligence with human-in-the-loop governance), currently leading a 4-person graduate team building an ML risk-prediction system.

SKILLS

Business Analysis:	Business Requirements Gathering, Business Process Mapping, Root Cause Analysis, Gap Analysis, SOP Design, Workflow Design, Vendor Evaluation, Change Management, Stakeholder Management, Cross-Functional Collaboration, Process Documentation, Continuous Improvement
Analytics & BI:	SQL, Excel (Advanced - VBA, Power Query, Pivot Tables, INDEX/XLOOKUP), Power BI, Tableau, Python (pandas), Financial Forecasting, Variance Analysis, KPI Development, Data Validation
AI & Applied Research:	Claude, ChatGPT, Gemini - AI-assisted research, documentation, and data analysis; prompt engineering; AI system design with human-in-the-loop governance
Systems Familiarity:	Toast POS ecosystem, QuickBooks, Jira, Asana
Languages:	English (Fluent), Thai (Native)

EDUCATION

M.S. Computer Science - AI Concentration	Expected Jul 2027
<i>Westcliff University, San Francisco, CA</i>	
- GPA 3.83/4.0 Founder's Scholarship for Computer Science (2026) IT Project Management: 99/100 (top of cohort) - Coursework: Machine Learning, Big Data Analytics & Visualization, Business Architecture & Organizational Transformation, IT Project Management, Management of Information Security	
M.Sc. Financial Technology (Merit) - University of the West of England, Bristol, UK, 2022	
B.S. Accountancy - Siam University, Bangkok, Thailand	

EXPERIENCE

Customer Service Advisor - International Markets	2022–2024
<i>The Hut Group (THG) - Northwich, UK</i>	
- Identified reporting gaps in customer operations and built Power BI dashboards analyzing reviews, refunds, complaints, returns, and claims - delivering data-driven insights that informed Customer Service Manager decisions - Developed Excel-based operational reports adopted for escalation tracking and team training across UK, EU, and Southeast Asia e-commerce markets - Resolved complex international cases in English and Thai, building cross-functional communication and stakeholder management skills	
Administrative Assistant, Finance & Operations (Part-Time)	2018–2019
<i>Intercultural Institute of California - San Francisco, CA</i>	
- Analyzed manual administrative and accounting workflows across disconnected records and supported digital transformation to cloud-based document management - reducing search time, duplicate data entry, and cross-team handoff errors - Designed workflows and Standard Operating Procedures (SOPs) standardizing administrative execution and reducing onboarding time for new staff - Maintained general ledger in QuickBooks with data validation before cross-department use	
Finance Manager - Financial Reporting & Process Improvement	2016–2017
<i>ASUSTeK Computer - Bangkok, Thailand</i>	
- Built Excel VBA process automation for recurring financial reporting - linking data sources, calculations, and formatting - cutting preparation time from 2–3 hours to ~30 minutes; authored SOPs enabling team-wide adoption and knowledge transfer - Designed a standardized cost-calculation template for a new on-site service line (labor, repair time, delay, and repeat-repair factors), adopted as costing standard and extended to affiliate operations in other countries - Developed financial forecasting models that improved budget accuracy by 15%, comparing prior-year actuals against new initiatives to support resource allocation decisions	

PROJECTS & APPLIED RESEARCH

ML Risk Prediction System - Team Lead (In Progress) 2026

Graduate ML course project, Westcliff University

- Leading a 4-person team building a dual-model risk prediction system (corporate financial distress + supply chain disruption) on 180K+ records with macroeconomic enrichment (NY Fed GSCPI); selected project scope, authored the 8-week delivery plan, assigned workstreams, and quality-review all deliverables

SME Restaurant Technology & Cost Optimization Framework (Independent Research) 2025

- Developed an independent framework for restaurant technology adoption and cost control, synthesizing POS vendor evaluation criteria (Toast, Square, MarketMan), inventory and recipe-costing methodology, and payment-processing cost benchmarking against published industry rate data
- Modeled SOP structures for purchase-order/receiving workflows, variance reporting, and waste tracking aligned to industry-standard prime cost targets
- Research findings extended into the published A.C.E. framework (below)

A.C.E. - AI Concierge & Engine (Published) 2026

- Authored an AI-driven financial intelligence framework addressing "financial blindness" in SME restaurant operations - AI-OCR invoice ingestion, dynamic menu pricing, and predictive labor scheduling - designed with human-in-the-loop governance at every financially consequential decision point (ResearchGate/SSRN, DOI: 10.13140/RG.2.2.33391.60326)

V.E.T. - Vendor Entity Threat Detection (Published) 2026

- Authored an AI-powered multi-domain data fusion framework for detecting adversarial entities in procurement supply chains; extended with a live-validated, independently reproducible SEC EDGAR XBRL financial health signal module (ResearchGate/SSRN, DOI: 10.13140/RG.2.2.33961.76641)
